

Solar System Projects

Mrs. Shepard's 4th grade students helped Mrs. Orth's 2nd grade students with a solar system project.

Mrs. Shepard's 4th grade class did their own projects first where they had to find relative diameter and radius of each planet. Then they used a compass to draw their planet to scale.

$$12,756 \text{ km} = 1 \text{ inch}$$

Then the 4th grade helped the 2nd grade make clay models of the planets, label them and put them in order from the sun. They also added other details.
